Grave Wounds

Playtest packet: one fight and a week in camp

Version 0.2.4, 14 November 2026, for 3 to 5 people and about 3 hours. One person is the GM.

What this is. Grave Wounds is a d100 game built on real wound records. Where a man is hit comes from the graves and surgeons' returns of his own war. A fight usually ends with men stopping, not dying, and what happens afterwards can kill them just as well. This packet sets four men of a Yorkist retinue at a crossing of the River Aire on 28 March 1461, the day before Towton. They fight once, and then have to get through a week in camp.

What we want to learn. Are the fights tense and quick enough? Do wounds feel fair? Are the camp's decisions interesting, or a chore? Nobody has played this at a table yet, so a blunt "this dragged" is the most useful thing you can tell us.

What you need. Pencils, two ten-sided dice for d100, scissors, and these pages. Everything to play on paper is here, with a hex map of the ford and counters to cut out at the back. If you'd rather, a phone or laptop can run the fight: **the wound roller does the arithmetic**. Open swares.github.io/grave-wounds/dist/team.html#playtest. It sets up the four men against Clifford's five, and the GM's script can play the enemy. Please tell us which way you played.

Pages	Who needs them
The fight, Wounds, Where it lands, What it does	Everyone
The camp	Everyone
Four character sheets, and a blank one	One to a player
The crossing, The week	The GM only
Camp log and session log, Feedback	The GM fills these in, with the table
At the back: the quick reference, the map, the counters, the enemy's roster	On the table. Print the reference once for each player, and the map and counters at actual size (100%)

What's where. Printed on both sides, a page marked *own sheet* has a blank back, so it can be handed out or cut up alone.

Pages	What's there	Printed both sides
1–6	The cover, The fight, Wounds, Where it lands, What it does, The camp	
7, 9, 11, 13	The characters: William of Ely, Gilbert Cooper, Edmund Miller, Nicholas Fletcher	Own sheet each
15	A blank character sheet	Own sheet
17–20	The crossing, The week, Camp log and session log, Feedback	
21	Quick reference	Own sheet
23	The ford at Ferrybridge	Own sheet
25	Counters	Own sheet
27	Clifford's men	

Which setting? Play **Standard** first. If you play again, try **Gritty**. The sheets show both.

After you play. Send your answers from the feedback pages through the feedback form, at swares.github.io/grave-wounds/feedback.html. The same form takes a quick comment. To hear about later versions, sign up on the start page.

This packet is free to copy and share for playtesting. It is an early version: please don't sell it or post it as finished. The numbers and tables are generated from the game's own data.

The fight

A round is 6 seconds. Every fighter gets one turn, highest **initiative** first. Each man rolls once at the start: d10 + Agility ÷ 10, rounded down.

The one roll. Roll d100. Equal to or under the number succeeds, and how far under is the **margin**. A roll at or under a tenth of the number is a **critical**.

On his turn

1. **Move.** Stay, **advance** up to 4 hexes and still attack, or **run** up to 12 and not attack. Walking away from an enemy beside you gives him a free attack.
2. **Attack.** d100 against Attack, less your penalties. You may first declare an **aim** at a zone, at a gap in the armour, or both. Each costs 20 of your margin on a hit, and is free on a critical.
3. **Defence.** The defender rolls d100 against Defence, less his penalties. Success turns the blow. A critical can't be defended.
4. **Where it lands.** d100 on *Where it lands*, under the attacker's weapon. With a sword, bill or dagger, the attacker chooses **cut** or **thrust** before he rolls. A longbow pierces.
5. **How bad.** Margin under 20: **light**. 20 or more: **serious**. 50 or more, or a critical: **critical**. A margin of 2 or less only **grazes**, unless it is a critical: a step less bleeding and pain, and no stop check.
6. **Armour.** Armour lowers the severity by steps. See *Where it lands*.
7. **The wound.** Read it from *What it does* and write it on the sheet.
8. **Stop check.** A serious or critical wound marked **S** needs d100 against the wounded man's Nerve, less his pain and blood penalties, and 10 more for a critical. Players' men add their setting's bonus.

Result	He is	Which means
Equal or under	Fighting on	No change
Failed by 1–20	**Defend only** for 2 rounds	No attack; he may move and defend
Failed by 21–40	**Stunned** for 2 rounds	No attack; −50% to his defence
Failed by more than 40	**Out of the fight** until helped or the fight ends	Takes no part: no attack, no defence

End of the round. Everyone bleeds. Then a side with 25% or more of its men down rolls d100 against the best Nerve among those still up: +10 while a leader is up, −20 if he is down, −20 once 50% of the side is down. Over the target, the side breaks: it runs or surrenders.

Lethality. Standard: Blood ×1.5, +20 to Nerve on stop checks, and one **fate** point, which lowers a wound a step, or rerolls a stop check, recovery or fever roll. Gritty: Blood ×1, no bonus, no fate.

> **A worked blow**
> Gilbert shoots at 55% and rolls 31: a margin of 24, **serious**. The billman dodges at 35% and rolls 72, so it hits. On the longbow column, a 40 is the right chest. His jack would lower the wound a step, but the war bow takes a step off armour, so it stays serious. The thrust table gives **B2 P2 S**: bleeding step B2, which the Bleeding table makes 1 Blood a round; pain step P2; and a stop check: Nerve 50, less 20 for pain.

 © 2026 Scott Wares. All rights reserved. Free to copy for playtesting.

Wounds

A wound has five parts, and they add up across all of a man's wounds. **Bleed (B) and pain (P) are steps, not points:** B2 is the second bleeding step, and the Bleeding table below gives the Blood it costs.

Bleeding. Every man has a **Blood** pool, on his sheet.

Bleed	Blood lost	What it is
B0	none	None
B1	1 a minute	Slow: seeping; lose 1 Blood per minute
B2	1 a round	Heavy: lose 1 Blood per round; bind within minutes
B3	3 a round	Arterial: lose 3 Blood per round; tourniquet or pressure now

Blood left	Effect
75% or less	Pale and weak: -10% to all actions
50% or less	Faint check each minute; -20% to all actions
25% or less	Barely conscious: -40% to all actions, can only crawl
None	Unconscious and dying

Pain. −10% to attack and defence for each step, counted to 3 steps. Above that, a stop check every round.

Impairments. Each counts once. Attack and defence penalties are capped at −60%.

Impairment	What it does	Attack	Defence
Dazed	Stunned: lose next action, then -20% for 1d6 rounds	−20%	−20%
Vision	Vision impaired: -30% to sight-based actions; blinded if both eyes	−30%	−30%
Breath	Winded: no sustained exertion; fatigue doubled	−10%	−10%
Collapse	Collapses; can only crawl or crouch	−20%	−30%
Stand	Falls and cannot stand unaided	−20%	−30%
Leg	Movement halved; -20% to footwork and dodging	—	−20%
Move	Movement halved	—	−10%
Unconscious	Knocked out (check each minute to wake)	—	—
Speech	Cannot speak clearly	—	—
Arm (weapon arm)	That arm -20%; no two-handed use	−20%	—
Arm (shield arm)	That arm -20%; no two-handed use	—	−10%
Grip (weapon arm)	Drops anything held in that hand; cannot grip with it	−30%	—
Grip (shield arm)	Drops anything held in that hand; cannot grip with it	—	—
Hand useless (weapon arm)	That hand useless	−30%	—
Hand useless (shield arm)	That hand useless	—	—
Arm useless (weapon arm)	That arm useless	−40%	—
Arm useless (shield arm)	That arm useless	—	−10%

The clock. How long the wound takes to kill if left untreated: days, hours, minutes, rounds or instant.

A man with an arm hurt can't use a two-handed weapon: a bow, a bill or a poleaxe. He can only defend until he takes up something else.

First aid. A friend beside him may treat a wound on his turn. Roll d100 against the side's best Leechcraft:

- **Bind:** one step less bleeding, 2 steps on a success.
- **Tourniquet:** an arm or leg only. The bleeding stops. Left on for hours, the limb is lost.
- **Cauterise:** the bleeding stops, at one more step of pain. A success adds no pain.

Where it lands

Roll d100 under the attacker's weapon. These odds come from the Towton table, adjusted from the bone evidence for wounds that leave no mark on bone.

Place	Sword	Bill	Longbow	Dagger
Skull (left)	01–12	01–13	01–12	01–11
Skull (right)	13–21	14–23	13–21	12–19
Face	22–27	24–30	22–27	20–27
Neck	28–31	31–34	28–31	28–34
Chest (left)	32–38	35–40	32–38	35–43
Chest (right)	39–44	41–45	39–44	44–50
Abdomen	45–51	46–51	45–51	51–59
Groin / pelvis	52–54	52–54	52–54	60–63
Upper back	55–58	55–58	55–58	64–68
Lower back	59–61	59–61	59–61	69–72
Shoulder (left)	62–63	62–63	62–63	73–74
Shoulder (right)	64	64	64	75
Upper arm (left)	65–66	65–66	65–66	76–77
Upper arm (right)	67–68	67–68	67–68	78–79
Forearm (left)	69–71	69–71	69–71	80–82
Forearm (right)	72–74	72–74	72–74	83–85
Hand (left)	75–78	75–78	75–78	86–89
Hand (right)	79–82	79–82	79–82	90–93
Thigh (left)	83–86	83–86	83–86	94–95
Thigh (right)	87–90	87–90	87–90	96–97
Knee (left)	91	91	91	–
Knee (right)	92	92	92	–
Lower leg (left)	93–95	93–95	93–95	98
Lower leg (right)	96–97	96–97	96–97	99
Foot (left)	98–99	98–99	98–99	00
Foot (right)	00	00	00	–

Armour. Each kit below gives steps off the severity, Critical to Serious to Light to Stopped. A stopped blow is only a bruise. Where a place is only partly covered, read the **units digit of the attack roll**, with 0 as 10. At or under the cover shown in tens, the blow met the armour.

Part (steps: cut/pierce/crush)	Brigandine and sallet	Jack and sallet
helm	3/2/1	3/2/1
gorget	2/1/0	2/1/0 on 5
torso upper	2/2/1	2/1/1
torso lower	2/2/1	2/1/1
skirt	2/1/0	2/1/1
pauldron	3/2/1 on 6	2/1/1
arm	3/2/1 on 5	2/1/1 on 7
gauntlet	3/2/1 on 5	–
leg	2/1/1 on 4	–

A longbow's arrows take 1 step off the armour's pierce figure, so a jack gives them nothing and a brigandine only 1.

Range. A longbow reaches 20, 60, 125 hexes: short, medium and long. Each hex is 2 yards. On paper take −20 at medium range and −40 at long; the roller does it for you. On the map, count the hexes between the two men; to a man still on the approach track, count the hexes to the map's north edge and add his box number.

 © 2026 Scott Wares. All rights reserved. Free to copy for playtesting.

What it does

Find the place and the blow. Each entry gives its **bleeding step** (B) and **pain step** (P), then **S** if it calls for a stop check, then how long it takes to kill and any impairments. Fever is the risk of wound fever in camp. A longbow's wound uses the thrust columns. A knee or foot may not bleed at all.

Place	Fever	Light cut	Serious cut	Critical cut	Light thrust	Serious thrust	Critical thrust
Skull	high	B1 P1	B2 P2 S dazed	B3 P3 S hours unconscious	B1 P1	B1 P2 S days dazed	B2 P3 S minutes unconscious
Face	high	B1 P1	B3 P2 vision	B3 P3 S days vision speech	B1 P1	B2 P2 days vision	B2 P3 S hours vision speech
Neck	high	B1 P1	B3 P2 S hours	B3 P3 S rounds breath	B1 P1	B2 P2 S minutes	B3 P3 S rounds breath
Chest	high	B1 P1	B3 P2 S days breath	B3 P3 S minutes breath collapse	B1 P1	B2 P2 S hours breath	B3 P3 S rounds breath collapse
Abdomen	high	B1 P1	B2 P2 days	B3 P3 S hours collapse	B1 P1	B1 P2 hours	B2 P3 S rounds collapse
Groin	high	B1 P2	B3 P3 S leg	B3 P3 S minutes stand	B1 P2	B2 P3 S days leg	B3 P3 S rounds stand
Back upper	high	B1 P1	B2 P2 arm	B3 P3 S hours breath collapse	B1 P1	B1 P2 days arm	B2 P3 S rounds breath collapse
Back lower	high	B1 P1	B2 P2 move	B3 P3 S days stand	B1 P1	B1 P2 days move	B2 P3 S minutes stand
Shoulder	medium	B1 P1	B2 P2 arm	B3 P3 S days arm useless	B1 P1	B1 P2 arm	B2 P3 S days arm useless
Upper arm	medium	B1 P1	B2 P2 arm	B3 P3 S severed minutes arm useless	B1 P1	B1 P2 arm	B3 P3 S hours arm useless
Forearm	medium	B1 P1	B2 P2 grip	B3 P3 S severed minutes arm useless	B1 P1	B1 P2 grip	B2 P3 S hours arm useless

The camp

After the fight, each day runs the same way. Use the camp log.

1. **Evening council.** The four roles decide, in this order. A role with nothing to decide is skipped.
   - **Leader:** stay, move, and what kind of camp.
   - **Scout:** where to go, and how the watch is set.
   - **Quartermaster:** what the men eat, and what they try to find.
   - **Leech:** who gets the medical stores, and how clean the camp is kept.
2. **The day's weather** is on the GM's page, and it can make a night hard.
3. **The night.** A man in camp gets back 4 Blood.
4. **Wound fever.** On the 3rd to 5th day after the fight, roll once for each wound: 5% for low risk, 15% medium, 30% high. Add 5 with no camp, take off 5 in quarters, and take off a leech's Leechcraft ÷ 10. A septic wound moves a step worse, and is checked every night.

Every 7 days: the recovery check. Each wound rolls d100 against the man's **Endurance**, plus:

What	To the roll
Care: no camp	-20
Care: a camp	+0
Care: quarters in houses	+10
He marched that day	-20
He rested	+10
A night harder than the shelter (cold, wet)	-10
Poor hygiene	-10
A leech with the force	+ his Leechcraft ÷ 10
Battle wounds heal easily	+20
Wound fever is hard	−25

Succeed by 30 or more: two steps better. Succeed: one step better. Fail: it holds, and at *deadly* he dies. Fail by 30 or more: one step worse. A wound starts on the track at its severity: light is **mending**, serious is **serious**, critical is **grave**. A wound that would kill in days starts at serious at least, and one that would kill in hours or less at grave.

Step	In a fight
Healed	—
Mending	−10% to attack and defence
Serious	−25% to attack and defence, cannot run
Grave	−25% to attack and defence, crawls only, defends only
Deadly	too ill to fight

Every 7 days: sickness. Each well man rolls d100. At or under the chance, he has the flux. A day or so later, roll d100 for how bad: 1–3 **deadly**, 4–15 **grave**, otherwise **serious**.

Camp	Flux this week, Endurance 50
Quarters, dead buried or far off	0%
Watched camp	1.5%
Bivouac	12.5%
Quarters, dead unburied nearby	4%
Watched camp, dead unburied	6.5%
Bivouac, dead unburied	17.5%

Food. A man carries 4 days' rations. With none left he goes hungry, so forage, buy or move while you can. **Hunting** in open country or woods: the Quartermaster rolls Fieldcraft at nightfall. A deer feeds 5 men for a day.

Camps. A **bivouac** needs nothing, and is poor hygiene. A **watched camp** needs nothing. **Quarters** in houses need the quartermaster to roll Persuade, and he must find somewhere that will take them.

William of Ely

Man-at-arms, aged 28. Sailor's orphan. Climbs anything; cannot sit a horse. Old wound: thigh r.

> **Your role: Leader.** March, stay, or seek or avoid a fight; what kind of camp. You roll for: Drill in camp.

Strength	Agility	Endurance	Wits	Nerve	Presence
50	75	40	57	52	47

Sword: Attack 72. **Defence:** 52. **Initiative:** d10 + 7. **Armour:** Brigandine, sallet and arm splints (c.1460).

Blood: Standard 28, Gritty 19. **Fate:** Standard 1, Gritty 0.

Skills

Blade 72	Polearm 25	Bow 37	Parry 52
Dodge 25	Leechcraft 14	Fieldcraft 19	Watch 43
Stealth 25	Persuade 23	Command 30	

Blood now

Gilbert Cooper

Archer, aged 24. Novice who left the cloister. Knows his herbs; faints at the sight of blood. Old wound: face; skull l.

> **Your role: Scout.** Which way to go, and how the watch is set. You roll for: Finding the way, The watch, against surprise, Stealth, to surprise the enemy.

Strength	Agility	Endurance	Wits	Nerve	Presence
35	60	50	56	21	21

Longbow: Attack 55. **Defence:** 45. **Initiative:** d10 + 6. **Armour:** Jack and sallet (archer or billman, c.1460).

Blood: Standard 30, Gritty 20. **Fate:** Standard 1, Gritty 0.

Skills

Blade 45	Polearm 17	Bow 55	Parry 30
Dodge 45	Leechcraft 29	Fieldcraft 18	Watch 28
Stealth 20	Persuade 10	Command 7

Edmund Miller

Spearman or billman, aged 20. Huntsman's son. Moves quietly; known as a poacher. Old wound: none.

> **Your role: Quartermaster.** Eat stores, forage, hunt or buy; what gets dropped; where to quarter. You roll for: Foraging on the march, Hunting for the pot, Finding billets, Mending kit.

Strength	Agility	Endurance	Wits	Nerve	Presence
40	60	80	35	50	40

Bill: Attack 35. **Defence:** 35. **Initiative:** d10 + 6. **Armour:** Jack and sallet (archer or billman, c.1460).

Blood: Standard 34, Gritty 23. **Fate:** Standard 1, Gritty 0.

Skills

The crossing

For the GM.

Where and when. Ferrybridge, on the River Aire, before dawn on 28 March 1461. The Lancastrians broke the bridge, and Warwick's men forced the crossing on the 27th. Before dawn Lord Clifford's men fall on the Yorkist camp there. Lord Fitzwalter is mortally wounded rallying his men. That much is history. Our four men, and the small ford they hold just upstream, are ours.

Read this out. *It is dark and bitterly cold. You've been set to watch a ford a bowshot from the broken bridge, in case anyone tries to come round. Then the shouting starts behind you at the bridge, and men with no badges you can see come wading out of the dark.*

The enemy. Five of Clifford's men, all regulars. They are on foot here. On the roller they are already set up.

Man	Weapon	Armour	Attack	Defence	Nerve	Blood
Billman	Bill	Jack and sallet	50	35	50	20
Billman	Bill	Jack and sallet	50	35	50	20
Billman	Bill	Jack and sallet	50	35	50	20
Billman	Bill	Jack and sallet	50	35	50	20
Archer	Longbow	Jack and sallet	50	35	50	20

How it runs.

1. **Set-up (10 minutes).** Hand out the sheets and pick the setting. Each player places his man south of the water, on the map at the back. Clifford's men start on box 18 of the approach track, 30 hexes away; the GM keeps their numbers on the roster.
2. **Arrows (2 rounds).** Gilbert may shoot as they come on and wade, and Clifford's archer shoots back.
3. **The fight (45 to 60 minutes).** They close. Keep a note of the time.
4. **The end.** The side's nerve check decides it (*The fight*). A man who surrenders is a prisoner, and the Leader decides what happens to him. **If the four lose,** the game goes on: Yorkists come up from the bridge at sunrise, Clifford's men fall back north, and anyone left alive is found and carried to camp.

The ford, for this fight. The Aire is too deep to cross except at the ford, the three pale columns in the middle of the river. A man in the ford may advance but not run.

After the fight (10 minutes). Bind what can be bound. Carry the wounded back. Each of the four who can stand rolls d100 on the field:

d100	He finds	Worth (Days)
1–35	nothing worth the carrying	—
36–60	food, tobacco, a blanket	1–3
61–80	boots, a good coat, a knife	3–8
81–92	a purse or a watch	10–30
93–99	silver, a fine weapon	30–90
100	a windfall: jewels, a paymaster's chest	200–1000

The medieval captain's third goes to the lord. For this test, ignore pay and money otherwise.

 © 2026 Scott Wares. All rights reserved. Free to copy for playtesting.

The week

For the GM.

The news. Edward's army crosses and marches north. The four are left behind with whoever can't walk. On Palm Sunday, 29 March, snow falls all day, and there's a noise far to the north that the wounded take for the wind. The next day the carts begin to come back. Towton was the bloodiest day anyone can remember, and Pontefract and every village round it are full of hurt men.

The week's weather. Use this table, so nobody rolls for it. It is from the game's weather rules for this place and date, and the snow of the 29th is from the record.

Day	Weather	High	Low	Hard night in the open?
28 March	Heavy rain	43°F	30°F	Yes
29 March	Snow	34°F	28°F	Yes
30 March	Rain	52°F	39°F	Yes
31 March	Heavy rain	45°F	32°F	Yes
1 April	Rain	52°F	37°F	Yes
2 April	Overcast	50°F	36°F	No
3 April	Overcast	52°F	37°F	No

The decision that costs something. Where do they wait?

Choice	What it means
Stay at the crossing	No march. But the dead lie unburied within reach for 14 days, unless the four spend a day burying them.
Move to Pontefract, about 3 miles	Each man who can't walk takes 2 men to carry him, so the four may not be able to take everyone. −20 on any recovery check rolled on the march day. Then quarters, if the Quartermaster can find any.
Bury the dead, then stay	A day's work for every fit man, and no one forages that day. The sickness chance drops.

Events. Use one on a slow day, or roll d6. Each should make someone decide something.

d6	Event
1	A cart of wounded stops at the camp and asks for food. The Quartermaster must say yes or no.
2	A local man says the well by the camp has a dead horse in it. The Leech may move the water, at a day's work.
3	A stranger comes in with a Lancastrian badge under his coat, begging for a surgeon.
4	A priest offers to bury the dead for what the team found on the field.
5	Forage: the Quartermaster rolls Persuade or Fieldcraft. On a success, 2 days' rations.
6	A rider says Warwick wants every man who can walk at York. The Leader may send someone, or lie.

The end of the week. Make the recovery checks and the sickness rolls, then the feedback. Who is alive, and who can walk?

If you're using the roller only for the fight, that's fine. Keep the week on paper. The travel map can run a camp, but it isn't part of this test.

Feedback

Score 1 (no) to 5 (yes), and add a comment if you can. Send it through the feedback form: swares.github.io/grave-wounds/feedback.html.

Question	Score	Comment
1. Did the margin-to-severity result feel fair?	1 2 3 4 5	
2. Was the fight fast enough to stay tense?	1 2 3 4 5	
3. Did you understand why a wound had the effect it did?	1 2 3 4 5	
4. Were the daily and weekly checks interesting?	1 2 3 4 5	
5. Did the weather and sickness change any decisions?	1 2 3 4 5	
6. Was the evening council worth its time?	1 2 3 4 5	
7. Did your role give you something to decide?	1 2 3 4 5	
8. Was the lethality right for the setting?	1 2 3 4 5	
9. Would you play a second session with these men?	1 2 3 4 5	

Which rule did you have to read twice?

What would you cut?

What did you expect the game to do that it didn't?

Quick reference

Cut out or print one for each player.

The round. 6 seconds. Initiative d10 + Agility ÷ 10, rolled once; highest first. Every fighter takes one turn.

The one roll. d100 at or under the number. **Margin** = number − roll. **Critical** = at or under a tenth of the number.

On his turn. Move: stay, advance 4 and attack, or run 12 and not attack. Leaving an enemy's side gives him a free attack. **Attack:** d100 against Attack. **Aim** at a zone or a gap: 20 off the margin each, free on a critical. **Defence:** d100 against Defence turns it; not against a critical.

How bad. Margin under 20: light. 20+: serious. 50+ or a critical: critical. Margin 2 or less: a **graze** (a step less bleed and pain, no stop check), unless a critical.

Where and what. d100 on *Where it lands* under the weapon; cut or thrust is the attacker's choice before rolling (a longbow pierces). Armour takes steps off: Critical → Serious → Light → Stopped. Part-covered: the attack roll's units digit (0 = 10) at or under the cover's tens met the armour. Read the wound on *What it does*.

Stop check (S). d100 against Nerve, less pain and blood penalties, 10 more for a critical. Fail: he stops.

Range (longbow). Short to 20 hexes, medium to 60 (−20), long to 125 (−40). Off the map: hexes to the north edge plus the box.

End of the round. Everyone bleeds: B1, 1 Blood every 10 rounds; B2, 1 a round; B3, 3 a round. A side with 25% or more down rolls d100 against its best Nerve still up: +10 with a leader up, −20 if he's down, −20 once 50% are down. Over: the side breaks.

Pain. −10% a step, to 3 steps; above that, a stop check every round. **Impairments** cap at −60%.

First aid (a friend beside him, his turn, d100 against the side's best Leechcraft). Bind: a step less bleeding, 2 on a success. Tourniquet: arm or leg, bleeding stops. Cauterise: bleeding stops, +1 pain, none on a success.

Lethality. Standard: Blood ×1.5, +20 Nerve on stop checks, 1 fate. Gritty: Blood ×1, no bonus, no fate.

The ford. Too deep elsewhere. In the ford, advance only.

The ford at Ferrybridge

Approach track. Clifford's men start on box 18 and come south a box for each hex they move. Box 1 is next to the north edge.

Counters

Print on card, or glue to card, and cut along the lines. Each fits in a hex of the map. A man's Bleed marker shows his bleeding step (B1 to B3), his wounds' bleed added up (*Wounds* gives the Blood it costs each round); swap it as wounds are bound.

The four

William Sword	**Gilbert** Bow	**Edmund** Bill	**Nicholas** Dagger

Clifford's men

For the GM. All regulars, on foot. Roll each man's initiative at the start: d10 + 5. Blood is not multiplied for the setting: only the four's is.

Man	Init.	Attack	Defence	Nerve	Blood (tick one off each lost)	Wounds: place, severity, bleed, pain
Billman 1 Bill, jack and sallet		50	35	50	☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐	
Billman 2 Bill, jack and sallet		50	35	50	☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐	
Billman 3 Bill, jack and sallet		50	35	50	☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐	
Billman 4 Bill, jack and sallet		50	35	50	☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐	
Archer Longbow, jack and sallet		50	35	50	☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐☐	

Rounds

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

When a man is down, turn his counter over or put a *Down* marker on it. The side checks its nerve at the end of the round once 25% of it is down.
